

Group Management

The Team

- Project Management: Oliver (UCB)
- Development: Ray (UCB), UC Davis
- Interaction Development: Eli (UCB)
- Interaction Design: Daphne (UCB), Keli (Stanford), Joanna (MIT)
- Instructional Design: Jon (UCB), Angela (UCB)
- Others?

Terminology

- Use case: high level abstract functional requirement
- Scenario: Specific instance of use case in context. Likely these include several use cases strung together.

Terminology

- **Scenario:**

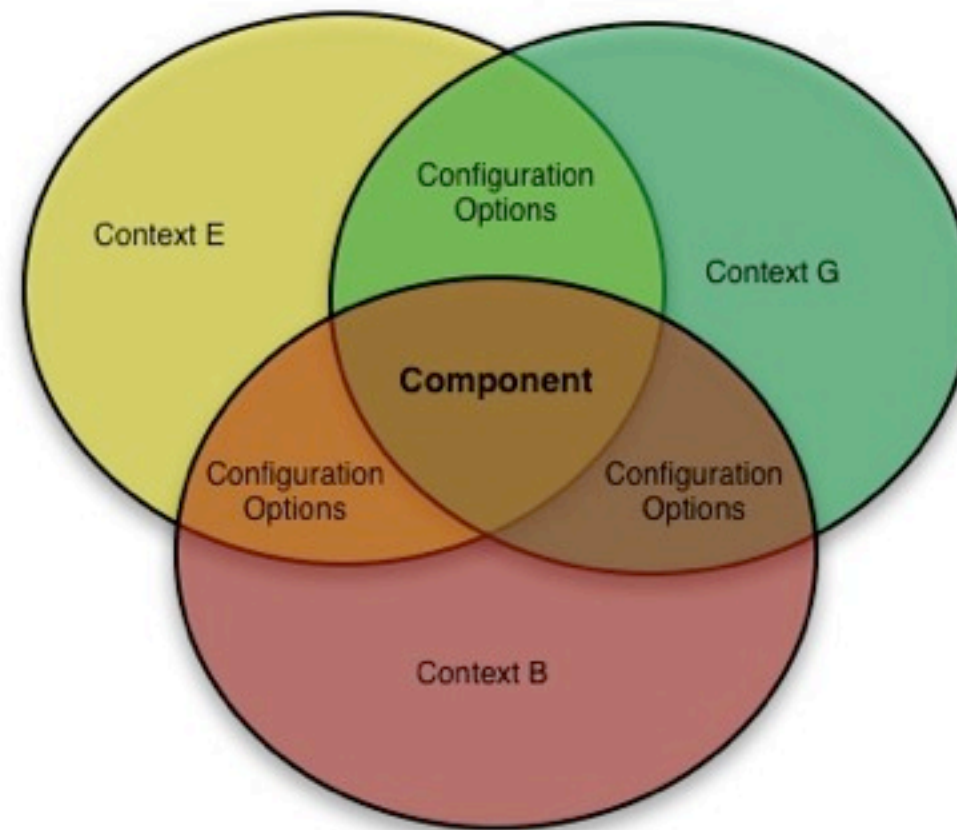

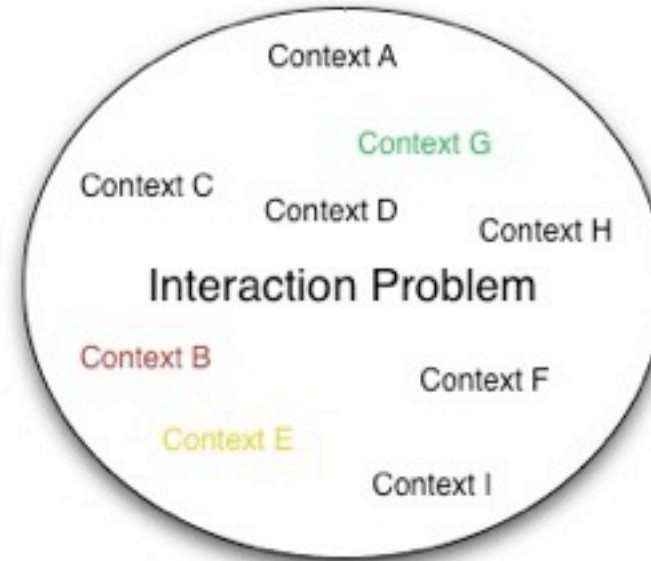

- Catalina is prepping for the upcoming year and the new Teaching Assistants for Spanish 1 she'll be managing. She needs to identify who all the TAs are and add them to her "TA knowledge sharing group" which she started 2 years ago. Once she's added them to the group, they'll have access to the collaborative space the group has been using to share information, discuss class details and work on course materials together.

- **Use Cases:**

- Find TAs
- Add TAs to group
- Invite TAs to collaborative space
- Send message about group space
- Find group space

Group Component?

For Review

- Problem Statement
- Personas
- Group type spreadsheet
- Use case matrix
- Scenarios
- Group definition (Keli's ppt)
- Course & Site Structures
- Project Glossary

Timelines

- Sept. '09: Initial prototype
- Iterative development
 - Need to select 1st phase & iterations within
 - Meaningful & reasonable breaks in functionality that add value for users (e.x. create student groups, find groups, authZ - clearly show role in current group in context)
- UX Activities

To Dos / Questions

- Flesh out UX Activities
- What about development activities? Are there some backend heavy activities that can start now while some of the UX work moves forward?
- Iterative approach - where do we start?
 - reasonable amt of work for Sept. & adds meaningful value to users
 - Thoughts?

Logistics

- Group Space: <http://confluence.sakaiproject.org/display/SAKDEV/Creating+and+Managing+User+Groups>
