

## createUsers.jmx (Jmeter script to create users in Sakai)

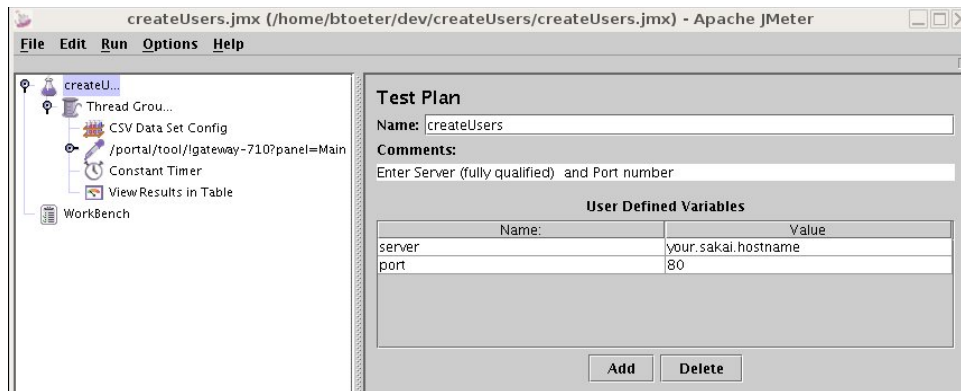

NOTE: This script depends on the availability of the 'New Account' tool and has a build in delay to prevent stress on your Sakai instance.

---

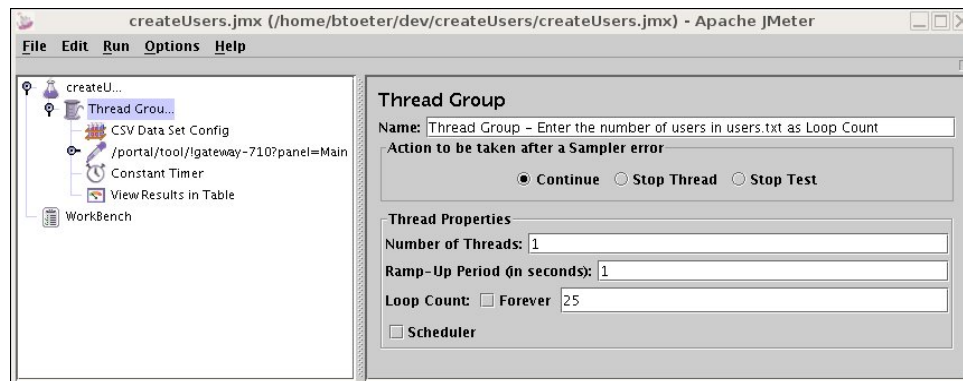

1. Open the users.sample.txt file. This file contains the names and id's of users that will be created in this format: uid,firstname,lastname,email,passwd

Change this file according to your requirements and **save it as users.txt**

2. Open JMeter and open the createUsers.jmx script. Click on 'Create Users' and enter the address and port number of your Sakai instance:

3. Click on 'Thread Group..' and set the 'Loop Count' to the number of users in your users.txt file:

4. Click 'Run'.....'Start'

Select 'View Results in Table' to monitor the requests going to Sakai.
